

Embrace the Environment when Cooking

Now more than ever, we are aware of the products we use in our homes. From the food we eat to the way in which it is prepared, we want to ensure we are doing the best for our families as well as the environment.

Created to provide an environmental choice in the kitchen, the EarthPan™ range of cookware has recently been introduced to the Australian market place. EarthPan™ is based on SandFlow™ nonstick technology; whereby the inner and outer surfaces of the pan are finished with a near impervious and nonstick coating created principally from sand.

Environmental benefits of SandFlow™ technology include the radical reduction of greenhouse gases during cookware production. In addition, the temperature used to seal the EarthPan™ range is half of that of traditional nonstick frypans.

Developed after three years of scientific research, this technology is exclusive to the EarthPan™ range and specifically designed for excellent food release and easy cleaning. Suitable for oven and stove top use, EarthPan's™ nonstick surface has been proven to last up to 57,000 scratch cycles; three times more than its closest competitor.

EarthPan™ Pro is available from leading independent homeware retailers, while EarthPan™ Plus is available from K-Mart and BIG W Australia wide.

The EarthPan™ range is a natural way for families and individuals to embrace environmental concerns when cooking.
